UK Authorised Biocidal Product Database (excluding rodenticides)

This searchable database lists the biocidal products other than rodenticides (Product Type 14) currently authorised for supply and use in the UK under the EU Biocidal Product Regulations 528/2012 (EU BPR). See [Approved Biocidal Products Page](#) for more information.

As many of the active substances used in biocidal products are still being assessed under the BPR review programme, products containing them do not yet require product authorisation from HSE under the BPR. You will not find details of these products in this database but they can be supplied and used in the UK if they are [BPR compliant](#).

For details of rodenticide products currently authorised in the UK see the [UK Authorised Rodenticide Product Database](#) for more information.

For details of biocidal products authorised in another EU Member State please contact the relevant authority in that Member State.
